Education

- Chandigarh University, Punjab, B.E. CSE August 2021 - June 2025
- Hansraj Modern School, Jhansi, Higher Secondary April 2017 - April 2021

Experience

- Soft Solutions, *Full stack engineer* December 2025 - Present
 - **Delivered seamless user experiences** for a fast-paced product startup, supporting the successful rollout of high-traffic gaming portals, **by building and enhancing interactive frontend web applications using React.js and Next.js.**
 - **Achieved near-zero latency and reduced backend database load**, drastically minimizing redundant frontend API calls, **by engineering robust state management solutions and refactoring core UI components.**
 - **Ensured continuous live data synchronization** across administrative control panels, successfully processing high-throughput data streams, **by integrating backend RESTful APIs.**

Tech Stack: Next.js, React.js, REST APIs, Bun.js, MongoDB, Git, Docker.

- Outlier, *AI tutor* Freelancer
 - **Minimized logic failures and hallucination rates** in state-of-the-art code-generation models, completing rigorous audits against adversarial test suites, **by developing and executing comprehensive evaluation pipelines in Python.**
 - **Catalyzed significant gains in the AI's zero-shot reasoning and syntax accuracy**, providing critical technical inputs for fine-tuning, **by curating high-fidelity, multi-turn training datasets.**

Tech stack: Python, Java, Prompt Engineering, LLM Evaluation, SFT Data Curation.

Projects

- *PulseNotify* | *React.js, UI Architecture, RESTful APIs*
 - Designed and launched an alerting & notification product with Spring Boot and React, focusing on an intuitive UI and seamless user experience.
 - Implemented persistent reminders and targeted alerts, managing data persistence with PostgreSQL.
- *AI-Powered Media Discovery Engine* | *Next.js, React.js, Tailwind CSS, Node.js*
 - Engineered a responsive content recommendation platform, integrating Google's Gemini API to process natural language user queries and dynamically surface relevant media.
 - Implemented real-time data fetching and secure user authentication by orchestrating the TMDB API and Firebase, ensuring a zero-lag browsing experience.
- *AI Research Dashboard* | *React SPA, Firebase, Asynchronous Data*
 - Built a responsive, Rich GUI to visualize complex asynchronous data streams, successfully translating heavy data requirements into a clean, intuitive Single Page Application (SPA).
 - Implemented a decoupled, component-based architecture, engineering interactive UI feedback loops and smooth skeleton-loading states to prevent interface freezing during backend data retrieval.
 - Integrated Firebase for real-time data synchronization, managing complex state transitions to ensure the frontend remained seamless and performant during continuous AI research outputs.
- *AI Technical Evaluator* | *Spring Boot, React, Gemini AI*
 - Streamlined the technical screening process by building an AI-driven mock interviewer capable of generating dynamic, context-aware questioning and real-time performance analytics.

Skills

- *Languages*
Java, Python (Familiar), JavaScript, TypeScript
- *Frameworks*
React.js, Next.js, Tailwind CSS, Spring Boot, Node.js
- *Databases*
PostgreSQL, Redis, MongoDB
- *Tools*
Docker, Firebase, Vercel, Render, Linux, Git
