GitHub: github.com/The-Tourist-170 | *LeetCode*: <https://leetcode.com/u/tourist170/> | Rating: 1340

Experience

- *Soft Solutions* — Full Stack Developer | Jan 2025 – July 2025 | Noida
 - Build and maintain React/Next.js frontends for high-traffic gaming portals; integrate backend REST APIs for live data sync across admin panels.
 - Refactored core UI components and centralized state management to cut redundant API calls and reduce backend database load.
 - **Stack**: Next.js, React.js, REST APIs, Bun.js, MongoDB, Git, Docker.
- *Outlier* — AI/ML Evaluation Analyst (Freelance / Contract) | 2025
 - Reviewed and rated code-generation LLM outputs against adversarial test suites in Python; curated multi-turn SFT datasets and wrote evaluation prompts feeding model fine-tuning.
 - **Stack**: Python, LLM evaluation, SFT data curation, prompt engineering.

Projects

- *Inventory System* — Spring Boot Microservices
github.com/The-Tourist-170/inventory-system | Java 21, Spring Boot 4, Spring Cloud Gateway, Spring Data JPA, Hibernate, PostgreSQL, MongoDB, Keycloak, Resilience4j, Testcontainers, Flyway, Docker, Maven
 - Built a polyglot-persistence microservices system (product on MongoDB, order & inventory on PostgreSQL) fronted by a Spring Cloud API Gateway.
 - Secured the gateway with Spring Security OAuth2 resource server, validating JWTs issued by a Keycloak (OAuth2/OIDC) authorization server.
 - Added Resilience4j circuit breakers on gateway and order-service; migrated inter-service calls from OpenFeign to Spring RestClient.
 - Orchestrated the full stack (7 containers) with one `docker compose up`; managed schema evolution with Flyway and wrote Testcontainers integration tests spinning real Postgres/Mongo containers per run.
- *PulseNotify* — Alerting & Notification Platform
github.com/The-Tourist-170/PulseNotify | Spring Boot, React, PostgreSQL, Docker, nginx
 - Built a full-stack alerting platform deployed via Docker Compose with nginx reverse proxy (same-origin in production — no CORS).
 - Modeled alert targeting with an AlertVisibility join table so one JPQL query resolves org-wide, team-level, and per-user audiences without N+1 queries.
 - Applied the Strategy pattern for notification channels (In-App/Email/SMS); scheduled reminders every 2 min enforce per-alert frequency against last-notified timestamps.
 - Fixed a timezone bug by migrating all temporal fields from LocalDateTime to Instant (UTC) end-to-end; multi-stage Dockerfiles, all config via env vars (12-factor).
- *AI Interviewer* — Resume-Aware Mock Interview Platform
github.com/The-Tourist-170/AI-Interviewer | Spring Boot, React, PostgreSQL, Docker, nginx
 - Built a resume-aware interview platform: backend parses uploaded PDFs with PDFBox, calls an AI to extract candidate strengths/weaknesses/skill ratings, then generates tailored technical questions.
 - Designed a pluggable AI provider layer (Strategy + @ConditionalOnProperty) switching between Gemini and any OpenAI-compatible endpoint via one config flag; modeled JPA entities with Testcontainers integration tests; frontend deployed live on Firebase Hosting.

Education

- *Chandigarh University, Punjab* — B.E., Computer Science & Engineering | Aug 2021 – Jun 2025 | CGPA: 7.3 / 10
- *Hansraj Modern School, Jhansi* — Higher Secondary | Apr 2017 – Apr 2021

Skills

- **Languages**: Java, SQL, JavaScript, TypeScript, Python
- **Backend**: Spring Boot, Spring Data JPA, Hibernate, Spring Security (OAuth2), Spring Cloud Gateway, REST APIs, Microservices, Resilience4j, RestClient, Flyway
- **Databases**: PostgreSQL, MongoDB, Redis
- **Auth**: OAuth2/OIDC, Keycloak, JWT
- **DevOps**: Docker, Docker Compose, Maven, Testcontainers, Git, Linux, Postman
- **Frontend**: React.js, Next.js, Tailwind CSS
- **DSA**: LeetCode 1340 rating + 310 problems solved
